Specialty Tree and Shrub Applications

All programs can be custom tailored to your specific case. Application recommendations are made for top results; however, we can do as many or as few treatments as requested. One is better than none.

Stress Recovery Program

The stress recovery program is designed to help any tree or shrub suffering from general decline. Whether it be drought stress, recovering from weather damage, poor pruning recovery, or underperforming and needs a boost, this program will provide exactly what the plant needs.

For best results, treatment should be done 1 to 2 times per year.

Included in each treatment:

- A balanced fertilizer to encourage healthy growth within the tree. It will not make the tree grow faster, as this can create weak growth that is more prone to insect and disease problems.
- A phosphate additive which works to stimulate the plants natural defense system, strengthen the cell walls within the plant to prevent water loss and minimize drought stress.

Soluble Potash...27%

- And organic micronutrient package will support all the systems within the plant to generate supported healthy growth. Micronutrients supply important necessary nutrients not found in most basic fertilizers.

Nitrogen.....1%
Magnesium...1.5%
Sulfur.....4%
Boron.....0.4%

Iron.....2.5%
Manganese...0.1%
Zinc.....0.1%

- An organic bio stimulant aids and encourages root and overall growth by improving the soil structure to free up and allow the plant to take up naturally occurring nutrients in the soil, as well as help to correct any pH imbalances.

Total Humic and Fulvic Acids...14%
L-Amino Acid Substrates...44.5%
Soluble Kelp Extract...2.5%

Plant Metabolites...16.5%
Carbohydrates...3%
Saraponins...1%

- A soil penetrant allows water to easily penetrate deeper into the soil. This enables the plant to absorb and retain more water while also supporting the immune system to recover from stress faster.

Specialty Tree and Shrub Applications

All programs can be custom tailored to your specific case. Application recommendations are made for top results; however, we can do as many or as few treatments as requested. One is better than none.

Color Gain Plus

When a tree or shrub is looking off color and does not have a deep green color that it should or once had, the plant may be struggling to extract the nutrients it needs from the soil. The Color Gain Plus program is designed to release locked up nutrients from the soil, as well as supply the plant with additional nutrients to get that green color back.

For best results 1-2 treatment should be done in the spring or 2 treatments around 21 days apart once symptoms appear.

Included in each treatment:

- A combination of nutrients that will give the plant a greener appearance without the excessive growth by improving the plant's energy and respiration systems.

Nitrogen.....12%
Magnesium...0.25%
Sulfur.....4%

Iron.....6%
Manganese...2%

- An organic micronutrient package will support all the systems within the plant to generate supported healthy growth. Micronutrients supply important necessary nutrients not found in most basic fertilizers.

Specialty Tree and Shrub Applications

All programs can be custom tailored to your specific case. Application recommendations are made for top results; however, we can do as many or as few treatments as requested. One is better than none.

Disease Defender Program

Not all diseases can be treated with a foliar spray. Root diseases can continue to affect a plant no matter how many times you treat with a foliar disease control. The Disease Defender Program was designed to fight these root/subsurface diseases. Using a biological fungicide, we can fight the disease below the surface. At the same time, we can supply the plant with the nutrients it needs to outgrow the damage and boost the plant's immune system so that it can fight the disease better on its own.

For best results, treatment should be done twice in the spring and twice in the fall, about 30 days apart (4 applications total).

Included in each treatment:

- An organic bio stimulant aids and encourages root and overall growth by improving the soil structure to free up and allow the plant to take up naturally occurring nutrients in the soil, as well as helping to correct any pH imbalances.

Total Humic and Fulvic Acids...14%
L-Amino Acid Substrates.....44.5%
Soluble Kelp Extract.....2.5%

Plant Metabolites...16.5%
Carbohydrates.....3%
Saraponins.....1%

- A biological fungicide prevents, suppresses and defends against pathogens in soil borne diseases. At the same time, it will encourage healthier roots, accelerate healthy plant growth and activate the plant's natural defense system.

Bacillus Subtilis (GB03)...0.03%
Nitrogen.....2%
Phosphorus.....3%

Potassium.....2%
(Trace amounts of calcium and
magnesium)

- A phosphate additive, which works to stimulate the plant's natural defense system, strengthen cell walls within the plant to prevent water loss and minimize drought stress.

Soluble Potash...27%

- A balanced fertilizer to encourage healthy growth within the tree. It will not make the tree grow faster, as this can create weak growth that is more prone to insect and disease problems.
- A soil penetrant allows water to easily penetrate deeper into the soil. This enables the plant to absorb and retain more water while also supporting the immune system to recover from stress faster.
